

AMENDMENT UNDER 37 C.F.R. § 1.111  
U.S. Appln. No. 10/665,432  
Attorney Docket No. Q77419

**AMENDMENTS TO THE SPECIFICATION**

**Please delete the present Abstract of the Disclosure.**

**Please add the following new Abstract of the Disclosure:**

A polymer composition includes a polymer having a glass transition temperature of 120°C to 400°C as a simple substance of the polymer and an organic modified layered silicate having a decomposition starting temperature of 190°C to 350°C and contained in the polymer.

(1) A film including the polymer composition, (2) a gas barrier film including the film and an organic/inorganic hybrid layer obtained by the sol-gel method and provided on the film, (3) a substrate comprising the film or the gas barrier film, and (4) an image display device comprising at least an anode, a light-emitting organic thin film layer and a cathode on the film or the gas barrier film are also disclosed. A polymer composition having both superior heat resistance and superior gas barrier properties, a film comprising the polymer composition, and a gas barrier film having the film, as well as a substrate and image display device exhibiting superior precision and durability are provided.
